

### **Amendments To The Specification**

Please replace paragraph [0010] with the following amended paragraph:

**[0010]** However this would entail the additional provision of a MSOGS of high capacity to deliver enough oxygen enriched gas at an oxygen concentration comparable with that provided from compressed storage containers. Such large capacity MSOGS would be heavy and bulky which is undesirable for an aircraft. Although a MSOGS is capable of ~~supply~~ supplying oxygen- enriched gas at an oxygen concentration up to about 95% oxygen, a very large MSOGS would be necessary to achieve this for the quantity of breathing gas demanded by an aircraft carrying a large number of passengers as well as its crew or else a plurality of smaller capacity MSOGS, which together again would be undesirably heavy and bulky or else a plurality of smaller capacity MSOGS may be provided which together again would be undesirably heavy and bulky.
